Unlike Denmark, in England it is very popular to arrange computer fairs for hobbyists.Recently, the "Computer Fair" was held in London, it was a huge audience success, but in return was poor on real news. Only real computer news was the Memotech MPL-5000 computers. Memotech has so far been best known for its ZX81 equipment. Memotech has provided its computer with Z80A processor, a genuine keyboard, in addition to Basic, an Assembler and Disassembler are built into the ROM. Later Pascal will be available and a yet unknown programming language for the Memotech Computer.
